

Seminar at ELLAB Food-Technology Academy

In Hamburg, on April 5th and 6th 2018, a seminar on current topics in thermal preservation took place in the course of the ELLAB Food-Technology Academy. Employees of dft technology GmbH enjoyed this opportunity to further educate themselves and to exchange ideas with other manufacturers and users.

Current developments in the field of IFS / FDA standards were just as interesting as reports from completed certifications and audits. In addition to the general basics of heat preservation and autoclave technology, the technical part focused on the temperature

distribution in batch autoclaves.

Dennis Fuhrmann, Managing Director of dft technology GmbH, presented the participants with various influencing factors, looked at different circulation systems and their effects on temperature distribution and informed the participants not only about the need for regular autoclave validation but also about the resulting process optimization possibilities.

„Overall Equipment Effectiveness“ (OEE) has logically been another exciting topic for all users. In the final workshop parts of the validation process (i.e. TD-Study, HP-Test) were practically exercised.

We would like to thank company ELLAB for the great event and will be happy to participate again in the future.
